

Alpha-Omega Services, Inc 2025 SBTi GHG Emissions Report

Published: March 17, 2026

Prepared by: Michael Hedger, Assistant Controller

Summary

In 2025, Alpha-Omega Services, Inc quantified its US-based GHG emissions per the GHG Protocol, totaling **63.55 tCO₂e** (Scope 1 + Market-Based Scope 2). Compared to our 2023 baseline of 84.92 tCO₂e, we have achieved a **25.2% reduction**, surpassing our 2025 target of 5.6% reduction toward our SBTi goal of 50.4% by 2032.

Key Insight

Electricity emissions decreased -20.75% from 53 tCO₂e in 2024 to 42 tCO₂e in 2025. The decrease highlights that the electric grid has gotten cleaner.

Progress Toward SBTi Target

Our SBTi target is a 50.4% reduction in Scope 1 and Market-Based Scope 2 emissions by 2032 from our 2023 baseline of 84.92 tCO₂e, requiring a 42.12 tCO₂e target by 2032. In 2025, we achieved 63.55 tCO₂e, a 25.2% reduction, exceeding the 5.6% annual reduction needed for a linear trajectory.

Methodology

Emissions were calculated using the EPA Simplified GHG Emissions Calculator, aligned with the GHG Protocol. Scope 1 and Market-Based Scope 2 emissions used AR5 GWP values and EPA Emission Factors Hub data. Market-Based Scope 2 emissions reflect residual mix factors (WECC CA, SERC MS) due to no renewable energy certificates or PPAs.

Actions Taken and Planned

In 2025, we reduced Market-Based Scope 2 emissions through energy efficiency measures. To address the Mobile Sources increase last year, we upgraded our forklifts to electric. We

are also evaluating renewable energy certificates and power purchase agreements to further lower Scope 2 emissions.

Conclusion

Alpha-Omega Services, Inc. remains committed to its SBTi target, achieving a 25.2% reduction in 2025. By pursuing renewable energy options, we aim to sustain progress toward a 50.4% reduction by 2032
